

0560 - Resin Capsules

Description

The Resin Capsule provides a high performance resin anchor system for use in safety critical applications. The capsule contains exact measures of resin, hardener and aggregate sealed in the glass tube. The resin anchor system is free of expansion forces and permits low axial spacings and edge distances.

There are two types available the Spin-In Version used with threaded studs and the Hammer-set version which is primarily used for rebar installation.

Advantages

- Exact measure of resin required for each application
- Suitable for reduced anchor spacing and edge distances
- Ideal for installation in wet or damp conditions
- Vibration resistant
- Suitable for a wide range of applications
- Fast curing time
- Clean installation

Typical applications

- Curtain walling brackets
- Heavy machinery
- Safety barriers
- Heavy duty signs
- Balustrading
- Brickwork support
- Structural steelwork
