

8mm Hex

Applications

¬ Flashing

- Steel framing systems

¬ Bracketry to steel

Composite panels
Wind posts

 A standard screwgun with a depth sensitive nosepiece should be used to install Teks. For optimal fastener performance, the screwgun should be a minimum of 6 amps and have an RPM range of 0-2500

Adjust the screwgun nosepiece to properly seat the fastener.

New magnetic sockets must be correctly set before use.

Remove chip build-up as

- Overdriving may result in

or stripout of the substrate

 The fastener must penetrate beyond the metal structure a minimum of 3 pitches of

torsional failure of the fastener

needed

Typical Performance Parameters

Climaseal® Coating

- Climaseal is a high quality metal filled thermoset coating. Climaseal has been uniquely formulated to react and form a complete long life protection to provide the optimum in corrosion resistance properties. Climaseal is self sacrificing to the base substrate if penetrated or damaged. Fasteners coated with Climaseal exhibit excellent resistance most forms of abrasion and torque.
- Chemical Identification: Organometallic Polymer

¬ Colour:	Silver/Metallic Grey
	Thermoset

Cure:	Thermoset
Typical Film Properties:	
Humidity Resistance	Excellent
Solvent Resistance	Excellent
Impact Resistance	Excellent
UV Resistance	Excellent
Fastener:	TEKS
Base Treatment:	Zinc (non-electrolytically applied)
Film:	Climaseal (Thermoset Polyester)
Test Method:	Salt Spray, ASTM B117 - 720 hrs
	Kesternich, DIN50018, 2.0L
