Designated according to The Construction Products (Amendment etc.) (EU Exit) Regulations 2020

UK Technical Assessment	UKTA-0836-22/6262 of 25/11/2022
Technical Assessment Body issuing the UK Technical Assessment:	British Board of Agrément
Trade name of the construction product:	VJ Technology Injection system XPE440 for concrete
Product family to which the construction product belongs:	Product code 33 - Fixings
Manufacturer:	VJ Technology Ltd. Brunswick Road Cobbs Wood Ind. Estate ASHFORD KENT TN23 1EN UK
Manufacturing plant(s):	VJ Technology Plant 1
This UK Technical Assessment contains:	42 pages including 3 annexes which form an integral part of this assessment
This UK Technical Assessment is issued in accordance with The Construction Products (Amendment etc.) (EU Exit) Regulations 2020 on the basis of:	EAD 330499-01-0601, Edition 04/2020

Communication of this UK Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may be made with the written consent of the British Board of Agrément. Any partial reproduction must be identified as such.

1 Technical description of the product

The VJ Technology Injection System XPE440 for concrete is a bonded anchor consisting of a cartridge with injection XPE440 and a steel element. The steel element consists of a commercial threaded rod with washer and hexagon nut in the range of M8 to M30 or reinforcing bar in the range of ∅ 8 to ∅ 32 mm or an internal threaded anchor rod IT-M6 to IT-M20.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use(s) in accordance with the applicable UK Assessment Document (hereinafter UKAD)

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this UK Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years and/or 100 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex B2, C1 to C5, C7 to C9, C11 to C13
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C1, C6, C10, C14
Displacements under short-term and long-term loading	See Annex C15 to C17
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annex C18 to C23

3.2 Safety in case of fire (BWR 2)

Not relevant.

3.3 Health, hygiene, and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

3.4 Safety and accessibility in use (BWR 4)

Not relevant.

3.5 Protection against noise (BWR 5)

Not relevant.

3.6 Energy economy and heat retention (BWR 6)

Not relevant.

3.7 Sustainable use of natural resources (BWR 7)

No performance assessed.

4 Assessment and verification of constancy of performance (hereinafter AVCP) system applied

4.1 System of assessment and verification of constancy of performance

According to UKAD No. 330499-01-0601 and Annex V of the Construction Products Regulation (Regulation (EU) 305/2011 as brought into UK law and amended, the system of assessment and verification of constancy of performance (AVCP) 1 applies.

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable UKAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with the British Board of Agrément and made available to the UK Approved Bodies involved in the conformity attestation process.

5.1 UKCA marking for the product/system must contain the following information:

- Identification number of the Approved Body
- Name/address of the manufacturer of the product/ system
- Marking with intention of clarification of intended use
- Date of marking
- Number of certificate of constancy of performance
- UKTA number.

On behalf of the British Board of Agrément 	
Date of Issue: 25 November 2022	**Hardy Giesler** Chief Executive Officer

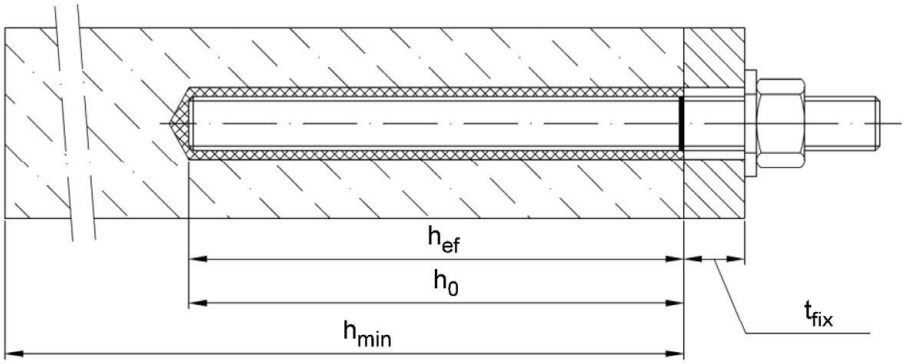
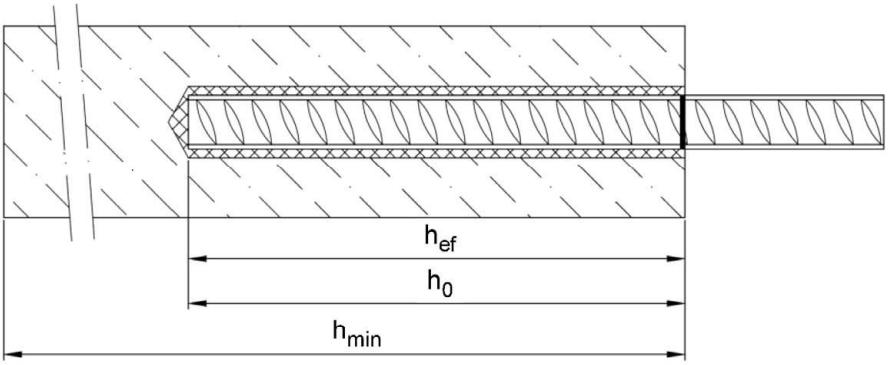
ANNEXES

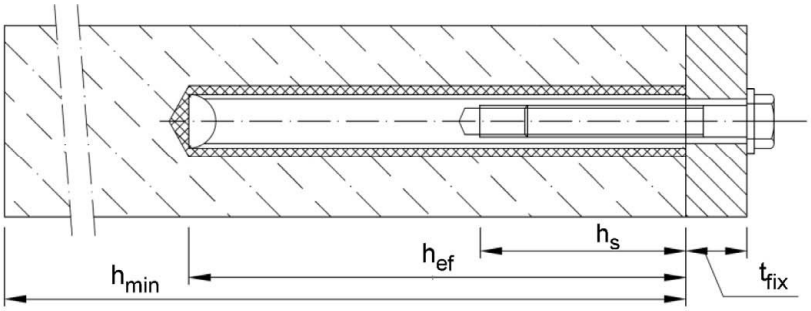
Installation threaded rod M8 up to M30
prepositioned installation or
push through installation (annular gap filled with mortar)



Installation reinforcing bar Ø8 up to Ø32



Installation internal threaded anchor rod IT-M6 up to IT-M20

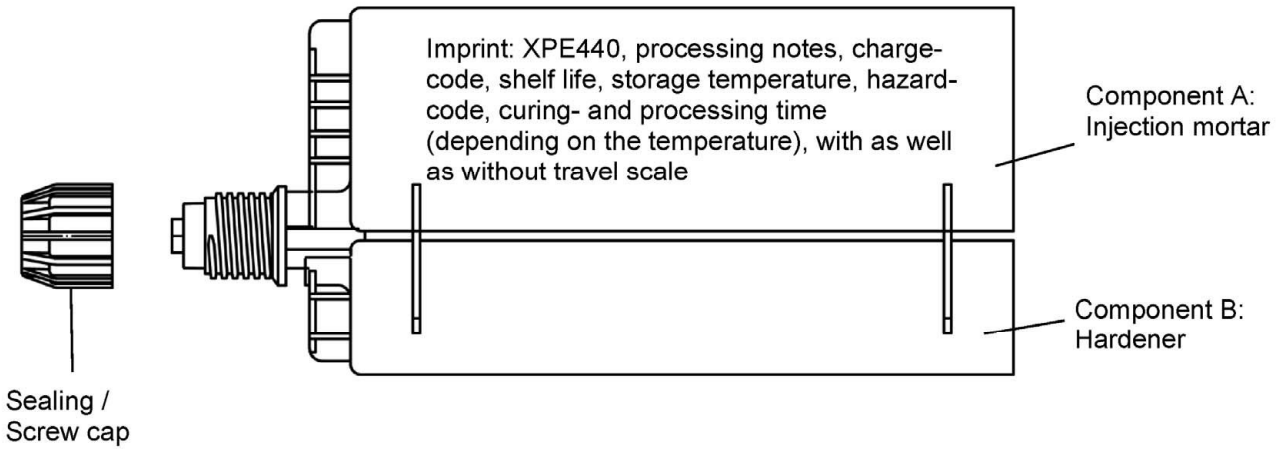


t_{fix} = thickness of fixture
h_{ef} = effective anchorage depth
h_0 = depth of drill hole
h_{min} = minimum thickness of member

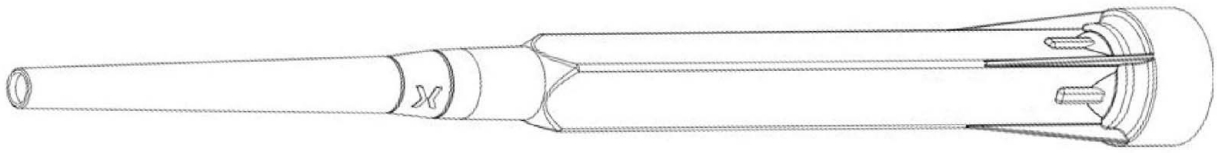
VJ Technology Injection System XPE440 for concrete	Annex A 1
Product description Installed condition	

Cartridge: XPE440

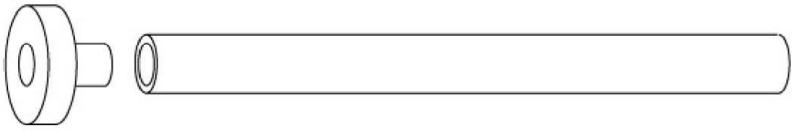
440ml, 585ml and 1400ml cartridge (Type: “side-by-side”)



Static Mixer

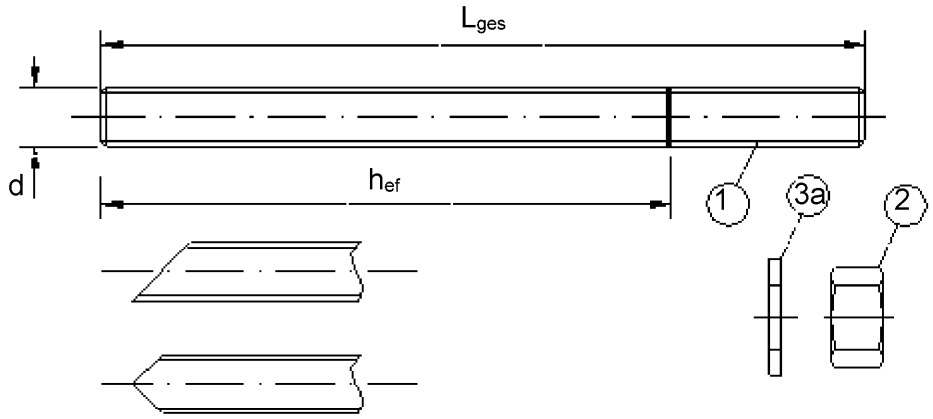


Piston Plug and Mixer Extension



VJ Technology Injection System XPE440 for concrete	**Annex A 2**
Product description Injection system	

Threaded rod M8, M10, M12, M16, M20, M24, M27, M30 with washer and hexagon nut

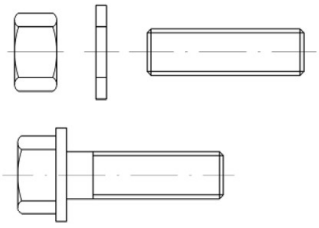


Commercial standard threaded rod with:

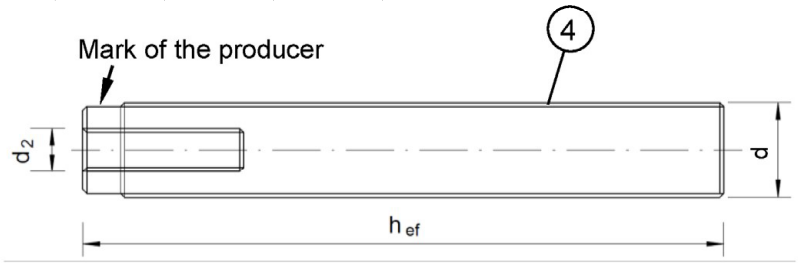
- Materials, dimensions and mechanical properties acc. Table A1
- Inspection certificate 3.1 acc. to BS EN 10204: 2004
- Marking of embedment depth

Internal threaded anchor rod IT-M6, IT-M8, IT-M10, IT-M12, IT-M16, IT-M20

Threaded rod or screw



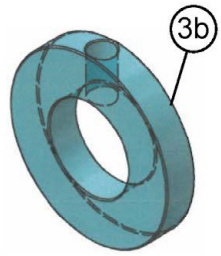
Mark of the producer

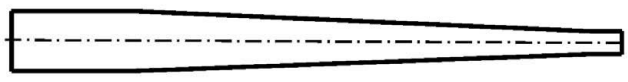


Marking: e.g.  M8

I	Marking Internal thread
◇	Mark
M8	Thread size (Internal thread)
A4	*additional mark for stainless steel*
HCR	additional mark for high-corrosion resistance steel

Filling washer and mixer reduction nozzle for filling the annular gap between anchor rod and fixture





VJ Technology Injection System XPE440 for concrete	**Annex A 3**
Product description Threaded rod, internal threaded rod and filling washer	

Table A1: Materials

Part	Designation	Material				
Steel, zinc plated (Steel acc. to BS EN ISO 683-4: 2018 or BS EN 10263: 2017 - Zinc plated ≥ 5 µm acc. to BS EN ISO 4042: 2018 - Hot-dip galvanized ≥ 40 µm acc. to BS EN 1461: 2009 and BS EN ISO 10684: 2004 + AC: 2009 - Sherardized ≥ 45 µm acc. to BS EN ISO 17668: 2016						
1	Threaded rod	Property class		Characteristic steel ultimate tensile strength	Characteristic steel yield strength	Elongation at fracture
		acc. to BS EN ISO 898-1: 2013	4.6	f_{uk} = 400 N/mm²	f_{yk} = 240 N/mm²	A_5 > 8%
			4.8	f_{uk} = 400 N/mm²	f_{yk} = 320 N/mm²	A_5 > 8%

Product description Materials reinforcing bar	

Specifications of intended use

Anchorages subject to (for a service life of 50 years):

	Static and quasi-static loads		Seismic action for Performance Category C1	Seismic action for Performance Category C2
Base material	Non-cracked concrete	cracked concrete	Cracked and non-cracked concrete	
Hammer drilling (HD), Hammer drilling with hollow drill bit (HDB) or compressed air drilling (CD)	M8 to M30, Ø8 to Ø32, IT-M6 to IT-M20		M8 to M30, Ø8 to Ø32	M12 to M24
Diamond drilling (DD)	M8 to M30, Ø8 to Ø32, IT-M6 to IT-M20	No performance assessed	No performance assessed	No performance assessed
Temperature Range:	I: - 40 °C to +40 °C (max long term temperature +24 °C and max short term temperature +40 °C) II: - 40 °C to +72 °C (max long term temperature +50 °C and max short term temperature +72 °C)			

Anchorages subject to (for a service life of 100 years):

	Static and quasi-static loads		Seismic action for Performance Category C1	Seismic action for Performance Category C2
Base material	Non-cracked concrete	cracked concrete	Cracked and non-cracked concrete	
Hammer drilling (HD), Hammer drilling with hollow drill bit (HDB) or compressed air drilling (CD)	M8 to M30, Ø8 to Ø32, IT-M6 to IT-M20		M8 to M30, Ø8 to Ø32	M12 to M24
Diamond drilling (DD)	No performance assessed	No performance assessed	No performance assessed	No performance assessed
Temperature Range:	I: - 40 °C to +40 °C (max long term temperature +24 °C and max short term temperature +40 °C)			

Base materials:

- Compacted, reinforced or unreinforced normal weight concrete without fibres according to BS EN 206: 2013 + A2: 2021
- Strength classes C20/25 to C50/60 according to BS EN 206: 2013 + A2: 2021

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (all materials).
- For all other conditions according to BS EN 1993-1-4: 2006 + A2: 2020 corresponding to corrosion resistance class
  - Stainless steel Stahl A2 according to Annex A 4, Table A1: CRC II
  - Stainless steel Stahl A4 according to Annex A 4, Table A1: CRC III
  - High corrosion resistance steel HCR according to Annex A 4, Table A1: CRC V

VJ Technology Injection System XPE440 for concrete	**Annex B 1**
Intended Use Specifications	

Design:

- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- The anchorages are designed in accordance to BS EN 1992-4: 2018 and Technical Report TR055, Edition February 2018

Installation:

- Dry, wet concrete or flooded bore holes (not sea-water).
- Hole drilling by hammer (HD), hollow (HDB), compressed air (CD) or diamond drill mode (DD).
- Overhead installation allowed.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.

VJ Technology Injection System XPE440 for concrete	**Annex B 2**
Intended Use Specifications	

Table B1: Installation parameters for threaded rod

Anchor size				M8	M10	M12	M16	M20	M24	M27	M30

Intended Use
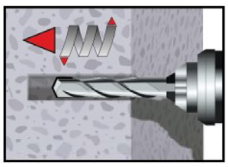
Cleaning and setting tools

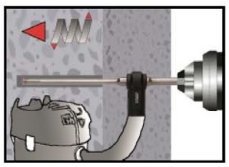
Annex B 4

Installation instructions

Drilling of the bore hole (HD, HDB, CD)



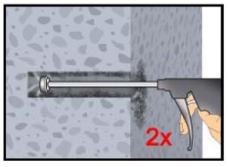
1a. **Hammer (HD) or compressed air drilling (CD)**
Drill a hole into the base material to the size and embedment depth required by the selected anchor (Table B1, B2, or B3). Proceed with Step 2.
In case of aborted drill hole, the drill hole shall be filled with mortar.



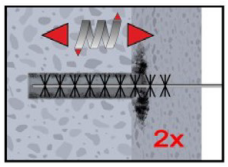
1b. **Hollow drill bit system (HDB) (see Annex B 3)**
Drill a hole into the base material to the size and embedment depth required by the selected anchor (Table B1, B2, or B3). This drilling system removes the dust and cleans the bore hole during drilling (all conditions). Proceed with Step 3.
In case of aborted drill hole, the drill hole shall be filled with mortar.

Attention! Standing water in the bore hole must be removed before cleaning.

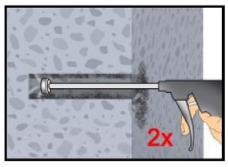
CAC: Cleaning for dry, wet and water-filled bore holes with all diameter in uncracked and cracked concrete



2a. Starting from the bottom or back of the bore hole, blow the hole clean with compressed air (min. 6 bar) (Annex B 4) a minimum of two times until return air stream is free of noticeable dust. If the bore hole ground is not reached an extension must be used.



2b. Check brush diameter (Table B4). Brush the hole with an appropriate sized wire brush > $d_{b,min}$ (Table B4) a minimum of two times in a twisting motion.
If the bore hole ground is not reached with the brush, a brush extension must be used.



2c. Finally blow the hole clean again with compressed air (min. 6 bar) (Annex B 4) a minimum of two times until return air stream is free of noticeable dust. If the bore hole ground is not reached an extension must be used.

After cleaning, the bore hole has to be protected against re-contamination in an appropriate way, until dispensing the mortar in the bore hole. If necessary, the cleaning has to be repeated directly before dispensing the mortar. In-flowing water must not contaminate the bore hole again.

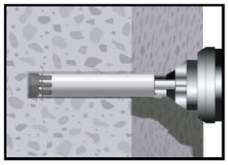
VJ Technology Injection System XPE440 for concrete

Intended Use
Installation instructions

Annex B 5

Installation instructions

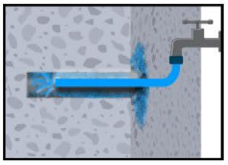
Drilling of the bore hole (DD)



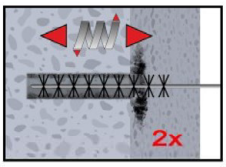
1a. **Diamond drilling (DD)**
Drill with diamond drill a hole into the base material to the size and embedment depth required by the selected anchor (Table B1, B2, or B3). Proceed with Step 2.
In case of aborted drill hole, the drill hole shall be filled with mortar.

SPCAC: Cleaning for dry, wet and water-filled bore holes with all diameter in uncracked concrete

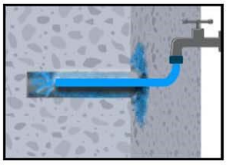
Attention! Standing water in the bore hole must be removed before cleaning.



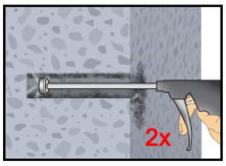
2a. Rinsing with water until clear water comes out.



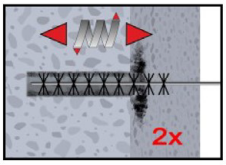
2b. Check brush diameter (Table B4). Brush the hole with an appropriate sized wire brush > $d_{b,min}$ (Table B4) a minimum of two times in a twisting motion.
If the bore hole ground is not reached with the brush, a brush extension must be used.



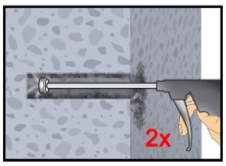
2c. Rinsing again with water until clear water comes out.



2d. Starting from the bottom or back of the bore hole, blow the hole clean with compressed air (min. 6 bar) (Annex B 4) a minimum of two times until return air stream is free of noticeable dust. If the bore hole ground is not reached an extension must be used.



2e. Check brush diameter (Table B4). Brush the hole with an appropriate sized wire brush > $d_{b,min}$ (Table B4) a minimum of two times in a twisting motion.
If the bore hole ground is not reached with the brush, a brush extension must be used.



2f. Finally blow the hole clean again with compressed air (min. 6 bar) (Annex B 4) a minimum of two times until return air stream is free of noticeable dust. If the bore hole ground is not reached an extension must be used.

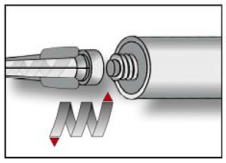
After cleaning, the bore hole has to be protected against re-contamination in an appropriate way, until dispensing the mortar in the bore hole. If necessary, the cleaning has to be repeated directly before dispensing the mortar. In-flowing water must not contaminate the bore hole again.

VJ Technology Injection System XPE440 for concrete

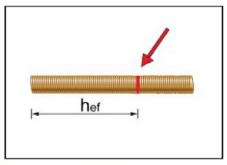
Intended Use
Installation instructions

Annex B 6

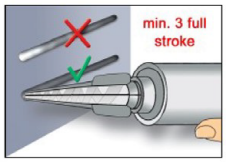
Installation instructions (continuation)



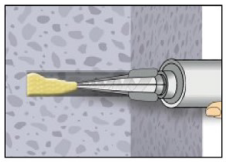
3. Attach the supplied static-mixing nozzle to the cartridge and load the cartridge into the correct dispensing tool.
For every working interruption longer than the recommended working time (Table B5) as well as for new cartridges, a new static-mixer shall be used.



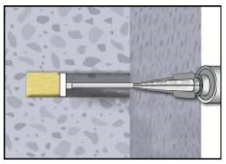
4. Prior to inserting the anchor rod into the filled bore hole, the position of the embedment depth shall be marked on the anchor rods.



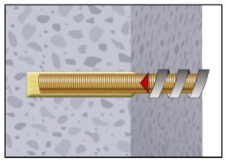
5. Prior to dispensing into the anchor hole, squeeze out separately a minimum of three full strokes and discard non-uniformly mixed adhesive components until the mortar shows a consistent grey or red colour.



6. Starting from the bottom or back of the cleaned anchor hole, fill the hole up to approximately two-thirds with adhesive. Slowly withdraw the static mixing nozzle as the hole fills to avoid creating air pockets. If the bottom or back of the anchor hole is not reached, an appropriate extension nozzle must be used. Observe the gel-/ working times given in Table B5.

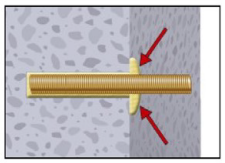


7. Piston plugs and mixer nozzle extensions shall be used according to Table B4 for the following applications:
   - Horizontal assembly (horizontal direction) and ground erection (vertical downwards direction): Drill bit-Ø $d_0 \geq 18$ mm and embedment depth $h_{ef} > 250$mm
   - Overhead assembly (vertical upwards direction): Drill bit-Ø $d_0 \geq 18$ mm

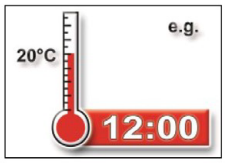


8. Push the threaded rod or reinforcing bar into the anchor hole while turning slightly to ensure positive distribution of the adhesive until the embedment depth is reached.

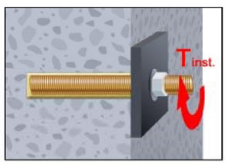
The anchor shall be free of dirt, grease, oil or other foreign material.



9. After inserting the anchor, the annular gab between anchor rod and concrete, in case of a push through installation additionally also the fixture, must be complete filled with mortar. If excess mortar is not visible at the top of the hole, the requirement is not fulfilled and the application has to be renewed. For overhead application the anchor rod shall be fixed (e.g. wedges).



10. Allow the adhesive to cure to the specified time prior to applying any load or torque. Do not move or load the anchor until it is fully cured (attend Table B5).



11. After full curing, the add-on part can be installed with up to the max. torque (Table B1 or B3) by using a calibrated torque wrench. In case of prepositioned installation the annular gab between anchor and fixture can be optional filled with mortar. Therefor substitute the washer by the filling washer and connect the mixer reduction nozzle to the tip of the mixer. The annular gap is filled with mortar, when mortar oozes out of the washer.

1) Fastenings (incl. nut and washer) must comply with the appropriate material and property class of the internal threaded rod. The characteristic tension resistance for steel failure is valid for the internal threaded rod and the fastening element.

2) For IT-M20 strength class 50 is valid

VJ Technology Injection System XPE440 for concrete

Performances
Characteristic values of tension loads under static and quasi-static action

Annex C 9

Table C10: Characteristic values of shear loads under static and quasi-static action

Anchor size for internal threaded anchor rods				IT-M6	IT-M8	IT-M10	IT-M12	IT-M16	IT-M20
Steel failure without lever arm[1)]									
Characteristic shear resistance, Steel, strength class	5.8	$V^0_{Rk,s}$	[kN]	5	9	15	21	38	61
