

1335 - Fischer FFS Masonry Screws

Description

The Fischer frame fixing screw, type FFS gives stress free stand off fixings without the use of additional plugs. The continuous thread in the frame and masonry ensures that the fixture cannot be pulled against the building material. Distortion of the profile will therefore not take place, either during or after installation (for inst. when applying insulating foam). The distance is also maintained when loads are subsequently applied. The long screw length make exact positioning easy.

Advantages

- Long lasting and stress free stand off fixing.
- Universal use for all common building and frame materials
- Tapered thread diameter at the front for easy engagement
- Optimised thread for a smooth, easy screw action.
- High load bearing with small drill hole diamete.
- The continuous thread prevents the fixture being pulled up against the building material.
- Cover caps to conceal the fixing.

Typical applications

- Window frames made of wood, metal and plastic.
- Door frames made of wood, metal and plastic.
- Window brackets
- Timber Battens

Fischer FFS Masonry Screws

VJT Code	Description	Drill Ø (mm)	Screw Length (mm)	Screw Drive	Head Ø (mm)	Box Qty
